

- **AGRICULTURAL AND HORTICULTURAL RESEARCH STATION, MADIKERI (ZONE-9)**

AHRS, Madikeri was established during 1965. The area comes under zone-9 i.e. hilly area. The soil types range from sandy to clay loams. The station is located in hill zone and receiving average of more than 3000 mm. High rainfall, high elevation and high relative humidity are the characteristic features of the zone. The station is meant mainly for breeder seed production of released varieties of paddy. Multi location trials on rice also carried out in collaboration with scientists of ZAHRS, Mudigere and AHRS, Madikeri.
